Profile

I'm Gustavo Avila, a passionate and dedicated software developer with over a decade of experience mastering Java, along with a strong track record using Spring Boot to build scalable and efficient applications. I specialize in transforming ideas into clean and robust digital solutions, applying object-oriented methodologies, design patterns, and modern architectures to tackle complex problems with maintainable code. My approach combines technical excellence with functional clarity: I create solid web experiences where design, performance, and usability converge. I am currently seeking to grow further as a web and backend developer, contributing my expertise in Java and Spring Boot to projects that demand quality, efficiency, and strategic vision.

Education

Licenciatura en Analista en Sistemas Jan 2000
Universidad de Buenos Aires, CABA

Employment

Developer, Build Engineer, Data Analyst, System Analyst Sep 2020 - Present
VATES, Munro

Monsanto Argentina SRL

Developed a soybean sales management system specifically designed for agricultural producers and laboratories. The system enhances operational efficiency by streamlining technology management and fee payment processes, addressing key needs within the agricultural sector.

Responsibilities:

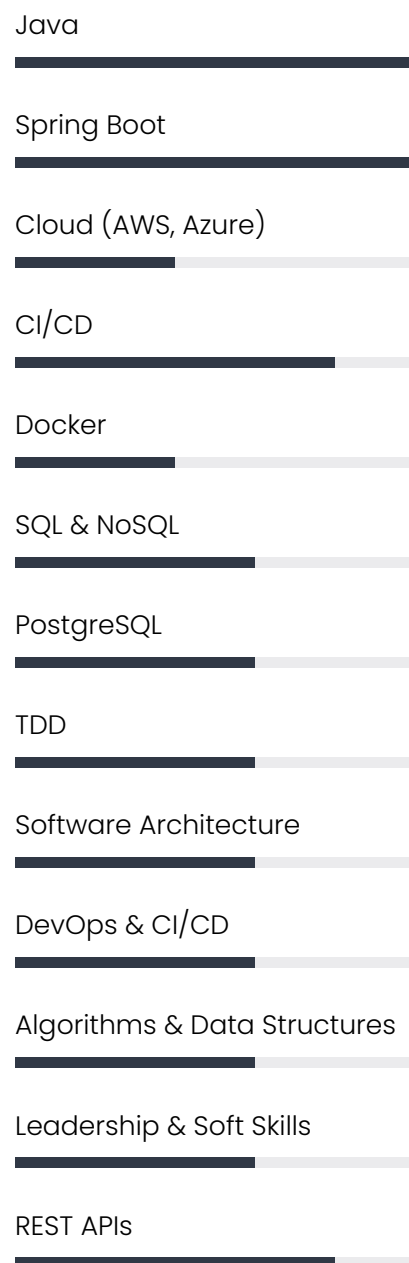

- Developed and maintained the system frontend using Angular 10 and the backend using Java 8
- Contributed to iterative development processes within an agile Scrum environment
- Designed and implemented a microservices architecture to enhance system scalability and flexibility
- Built backend services leveraging Java and Node.js technologies
- Managed and maintained Oracle and PostgreSQL databases to ensure data integrity and performance
- Integrated the system with SAP to enable seamless order invoicing functionality
- Utilized AWS services such as S3 and Cloud Foundry to establish a reliable and scalable infrastructure
